Kratki tutorial za automatsko dodavanje stranica za vaše tablice

1. korak: Desni klik na folder Controllers, odabrati add>New Scaffolded Item

2.korak: Odabrati MVC Controller with views, using EF

3. korak: Pod model class odabrati neku od tablica

4. korak: Ako pod controller name dodaju slovo s prije Controller preimenujte ga u ime tablice (ovdje je prije preimonovanja pisalo VrstaServisasController), te stisnite add

5.korak: Nakon dodavanja stranica treba postaviti link na početnu stranicu. U folderu Views odabrati Home Index i otvoriti file.

6. korak: Dodati novi link linijom @Html.ActionLink("tekst koji će pisati na linku", "ime viewa na koje se linka (za početnu stranicu nekog kontrolera staviti Index)", "ime kontrolera (bez Controller)")

''ime kontrolera (bez Controller)")

```
</div>*@
<div>
@Html.ActionLink("Servis","Index","Servis") <br />
@Html.ActionLink("ObaviServis", "Index", "ObaviServis") <br />
@Html.ActionLink("VrstaServisa","Index","VrstaServisa") <br />
</div>
```
